

iResponse - Classroom Responder System

Description

A classroom responder system for only 99 cents. No on-line subscription service required. The companion software is now available for PC and Mac.

Note: This app requires desktop companion software that is available for free at itate-solutions.com

Note: Sample data for loading into the iMTS app is available for free at itate-solutions.com

The iResponse system provides education and training institutions with the ability to use the iPhone and iPod touch to turn their lectures into an interactive learning experience. This will help students increase their learning and retain knowledge.

iResponse Classroom Responder System

- Allows instructors to formulate and send questions at any time directly to participants' iPhone or iPod touch devices from the instructor's desktop computer.
- Transmit test questions simultaneously and at any time during a class session to all iPhone and iPod touch devices connected to the class session via Wi-Fi.
- Instant feedback on the instructor's computer including who is connected, responses, and averages.

The iResponse system is comprised of two components: the iResponse Utility (downloaded by the Instructor) and the iResponse iPhone/iPod Touch Application (downloaded by the student).

iResponse iPhone/iPod Touch Application
